Engineering, Fabrication and Site Erection

Ore Sorter Project

Conveyors, Vessels & Structural Steel Works
for the Idwala Mine in Port Shepstone

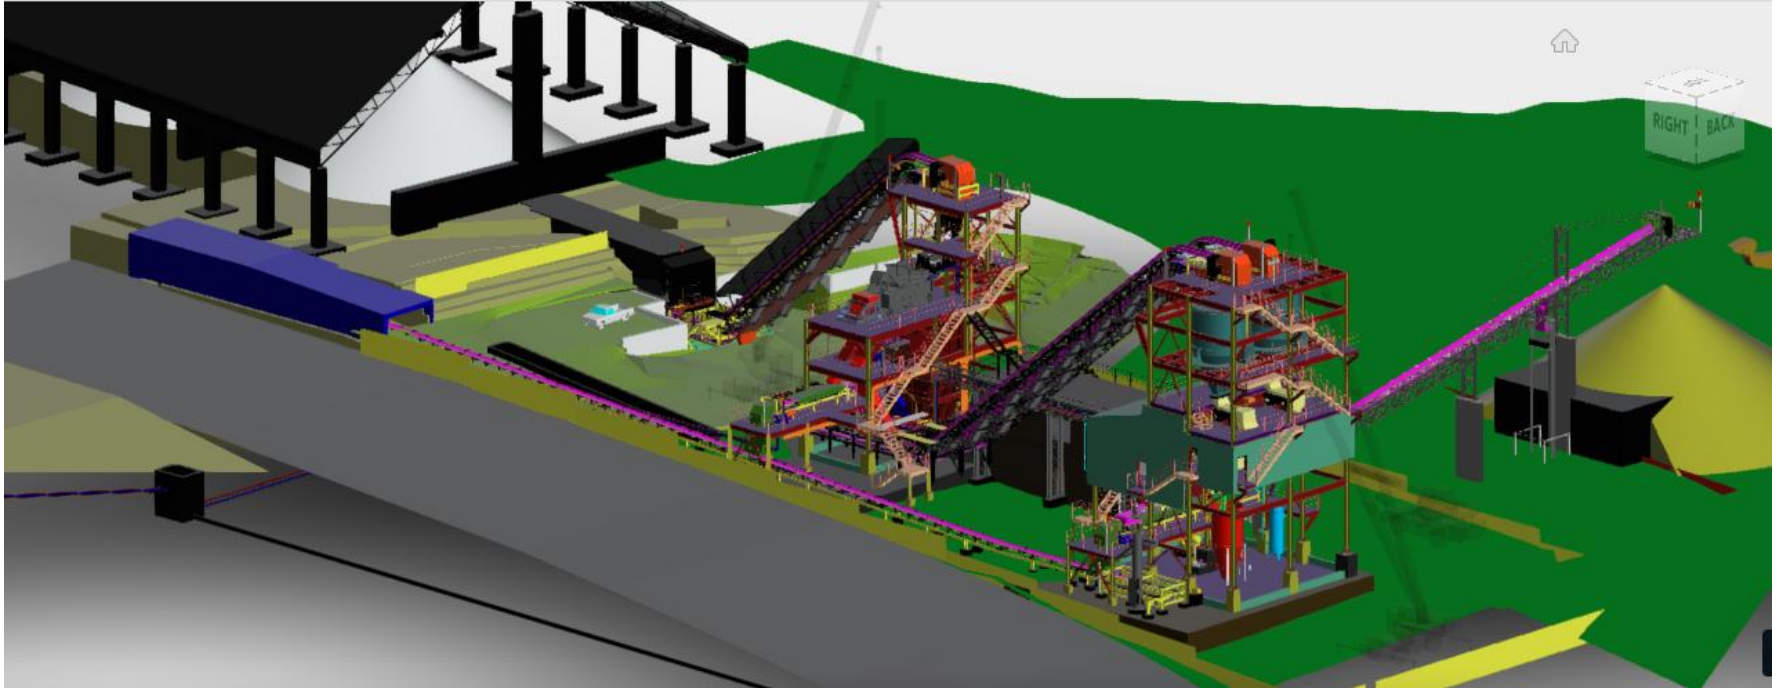

IDWALA PROJECT BACKGROUND

This granulated material is **processed through a floatation plant** where non carbonates are removed, thereby improving the chemical quality and colour of the product. ..a new development is designed.

This Green field project will tie-in to existing process

The scope included the manufacture and erection of the structures i.e. the washer building, sorter building, conveyor structures, piping racks and supports etc., and the mechanical erection and installation of the mechanical equipment which includes the conveyors, chutes, modifications to the existing conveyors, pumping systems, compressed air system, or system, , as well as the free issue items such as the washer with associated high pressure(140 bar) pumping system, sorters, washing screens, compressors, feeders, rinsing, etc.

We are approximately 30 kms away from the King Shaka Airport, Which provides easy access to all local and international flights.

Transportation is always available via our local distribution & transportation companies.
